

General

There is only one task.

Tasks description

In attached archive you will find blank template to start with. Please, provide well coded and clean template for design that placed in src/design folder. It should be fully responsive as well.

Few more notes: images are 320x240 I wish to have it 4/3 proportion across all screen sizes.

Highly recommend to customize bootstrap with overwrite variables.

We don't want you to solve this task with the easiest and common approach. Think outside of the box, be creative and show us what you really can do.

And be attentive to provided code, it could be helpful.

Tech stack, when designing the front part, must necessarily be based on bootstrap version 3.3.7 or higher, using SCSS, fontawesome could be used for icons, as well as any other useful lib, but it's should be really useful, and if it is, it's should be included right.

Best of luck! Can't wait to see your great solution!
